## **DexTech Medical informs about myeloma study**

The company's Phase 1 study regarding the effect of OsteoDex on patients with multiple myeloma (MM) has been initiated and recruitment of patients has begun. The study includes 20 patients and is initially conducted at three hospitals in Sweden: Karolinska University Hospital Huddinge, Uddevalla Hospital and Södersjukhuset in Stockholm. Another center in Sweden may be connected later.

The study is expected to be completed in Q4, 2024. Principal Investigator (PI) is Dr Katarina Uttervall, MD, PhD, Division of Hematology/HERM, Karolinska University Hospital Huddinge. Analysis of main blood markers takes place at the Central Laboratory, Karolinska University Hospital Solna, NKS. In accordance with the treatment schedule, OsteoDex is given every two weeks. The inclusion criteria include adult MM patients with relapsed/treatment-resistant disease, who have received 1–3 prior lines of therapy. The primary objective is to confirm safety and tolerability. Secondary objective is to determine treatment response, change in the level of disease-related biomarkers, and documentation of quality of life. The first patient is scheduled to be treated in April 2023.

**DexTech Medical AB** is a Swedish research company that, based on its technology platform, has developed four drug candidates that are protected by patents. The main candidate is OsteoDex for the treatment of castration-resistant prostate cancer (CRPC) with bone metastases. A successful clinical phase II study has been conducted with OsteoDex where the results show high tolerability with mild side effects and treatment effect on patients who fail on existing drugs. DexTech's goal is to outlicense each drug candidate no later than after the completed phase II study. DexTech Medical AB is listed on Spotlight Stock Market.
